Product Description

There are both new and second-hand trucks. Just tell us your transportation needs and we will customize tractors with different loading weights, volumes, and colors. A good truck will help you work well.

Product Description of Crane Truck:

The driver and the crane operator must work closely together and follow the signal commands of the command personnel. Before operation, the horn must be sounded first. If the command gesture is unclear or wrong, the driver has the right to refuse to execute. During work, the driver must stop immediately when anyone issues an emergency stop signal, and continue to work only after eliminating unsafe factors.

All traffic management rules and regulations must be observed, and driving after drinking is strictly prohibited. Smoking, eating and chatting are not allowed while driving.

When lifting heavier objects, the heavy objects should be lifted about 10 cm off the ground first, and the stability of the crane and the brakes should be checked to see if they are flexible and effective. Only when they are confirmed to be normal can work continue.

Product Application of Crane Truck :

A truck crane is a special vehicle that uses a hydraulic lifting and telescopic system to achieve the lifting, rotation and lifting of goods. It is usually installed on a truck. A truck crane is generally composed of a truck chassis, a cargo compartment, a power take-off, a crane and outriggers. It can be used in daily mining, construction cleaning, handling, wood, sand pumping, etc.
