Product Description

Product Description of cement powder tanker:

The cement powder tanker working principle is to use the power of self-contained engine to drive the vehicle air compressor through the power take-off, and send the compressed air into the air chamber at the lower part of the sealed tank through the pipeline, so that the powder material on the fluidized bed can be suspended into a flow state.

When the pressure in the tank reaches the rated value, the discharge butterfly valve is opened, and the fluidized powder material will transported through the pipeline.

Product Application of cement powder tanker:

Transport Efficiency: Essential for transporting bulk cement to construction sites.

Example Use Case: Used in highway expansion projects to deliver cement directly.
