Product Description

Product Description of Concrete Pump Truck:

Hydraulic Cylinder Diameter: The cylinders that extend the boom are typically large in diameter, for example, 220 mm, to provide the necessary force for extending and stabilizing the boom.

Hydraulic Pump: High-capacity variable displacement hydraulic pumps, such as a 210 mL/rev pump, ensure smooth and efficient operation of the boom and pumping system.

Hydraulic Oil Capacity: The hydraulic oil tank capacity can be around 800 liters, which helps in maintaining the temperature and ensuring continuous operation without overheating.

Delivery Cylinder Diameter: The diameter of the concrete delivery cylinder might be 210 mm, which determines the flow rate and pressure capability of the pump.

Delivery Cylinder Stroke: The stroke length can be around 1,200 mm, affecting the volume of concrete pumped per cycle.

Pipeline Material: High-wear-resistant steel or synthetic materials are used for the concrete delivery pipeline to withstand the abrasive nature of concrete.

Product Application of Concrete Pump Truck :

28m, 31m, 33m, 38m, 50m, 58m, and 65m concrete pump trucks and 28m, 38m, 44m, and 46m mixing pump trucks, 24m, 36m, and 47m aerial work vehicles, 10-50 ton bulk cement trucks, mobile unloadable mixing stations and other engineering machinery equipment; the country's first two-axle 38m pump truck, 46m mixing pump truck, four-axle 65m pump truck, cement truck, mobile unloadable mixing station and other star products.
